Anchor Bands

RubberBandsUK supply anchor bands as a two part item for quick and easy assembly in a range of sizes. If you need a bigger band, change it for another size and keep the anchor. In traditional anchor bands the tab is built in but this is made from the same soft/stretchy material as the band making it harder to assemble. Our tabs are made from a more rigid material that is also UV and weathering resistant, we also have a high temperature variant for extreme environments. Approximately 5/10mm of the band is used in the tab so a 100mm long band would become 90mm long with a tab.

Assembly Instructions

<p>1. Have the tabs and bands to hand.</p>	
	<p>2. Push the band through the hole in the tab to create two loops either side.</p>
<p>3. Push one loop inside the other</p>	
	<p>4. Pull tight</p>
